PROFILE

I'm an experienced developer / architect with a focus on the Microsoft Azure cloud platform.

Transforming functional specifications in user friendly, robust and controllable software is the most satisfying to me.

With more than 20 years of experience in IT, of which I spent over 15 years on Microsoft .NET development and more than 10 years working with the Microsoft Azure platform, I know what needs to be done to successfully complete a project.

As of 2016 I can be hired as a contractor for interesting and demanding projects.

In the last few years I've completely specialized myself as a developer and solution architect of applications on the Microsoft Azure Cloud platform. Besides development of the software I've also focussed on Continuous Integration / Deployment with Azure DevOps and Infrastructure-as-Code for fully automated deployment of the required infrastructure components.

I love to utilize my experience at my customers to improve the development processes and make them more reliable and predictable.

COMPETENCES

My strengths are:

- Projectbased working
- Problem solving
- Focus on quality
- Productive
- Teamplayer

KNOWLEDGE AND TECHNICAL EXPERIENCE

WORKEXPERIENCE

Company	stichd (part of Puma SE) via HSO
Role	Freelance Azure Integration consultant / solution architect
Period	November 2021 – now
Projects	stichd (part of PUMA SE) produces and supplies bodywear, legwear, swimwear, and fanwear for various globally renowned brands such as PUMA, Tommy Hilfiger, Levi's, Manchester City and Formula 1. With a team from HSO / Motion 10, we have implemented PitWall for stichd, an integration platform on Azure that connects almost all internal and external systems (e.g. SAP, Warehouse management, Product information management, Point of Sales) for messaging and data traffic based on Azure Integration Services. As an integration consultant/solution architect, I was responsible for the design and implementation (in collaboration with junior/medior developers) of various integration flows. The following services were mainly used: • Azure Service Bus • Azure Logic Apps (Standard and Consumption) • Azure Functions • Azure API Management • Azure Event Grid • Azure Storage • Azure CosmosDB • Azure Application Insights • Azure Key Vault • Bicep and Azure Resource Manager (ARM) templates • Azure DevOps Pipelines (YAML)

Company	Saint-Gobain Building Distribution Benelux (now part of BME Group)
Role	Freelance Azure / .NET developer / solution architect
Period	November 2017 – now
Projects	Saint-Gobain Building Distribution Benelux was a subsidiary of Saint-Gobain, a

	French multinational which produces a variety of construction, high-performance, and other materials. In 2021 the Dutch business units were acquired by BME Group. In June 2017, Saint-Gobain was hit by a major cyber attack (NotPetya) worldwide. This created the need for Saint-Gobain Building Distribution Benelux to migrate a large part of the internally hosted E-business platform to Microsoft Azure. Additionally, part of the on-premise hosted components (IIS / SQL Server / ETL tooling) needed to be migrated to a new Private Cloud provider. To minimize the risks of a new cyber attack, many requirements were set from the headquarters for the setup of the Cloud environment. Therefore, it was necessary to regularly communicate with security specialists, architects, and other IT officials from the headquarters in Paris. In this context, I was mainly involved in: • Setting up build/deployment pipelines for deploying all infrastructure components in Azure using Azure Resource Manager templates, Azure CLI, and PowerShell Scripts. • Setting up monitoring and alerting based on Application Insights / Azure Monitor. • The E-business platform was entirely based on Angular/PHP for the frontend, .NET (core) for the backend APIs, and SQL Server as the database system. A large part of the API endpoints was transformed from a monolith to separate microservices based on .NET Core, often with CosmosDB as the NoSQL datastore. Setting up new applications for, among other things: • Managing the aftersales process (claims and complaints) • Providing invoice information plus payment options via iDEAL • API Gateway as a Strangler Facade for the backend APIs I regularly presented knowledge-sharing sessions where I guided the internal developers in the setup and management of the components in Azure. Additionally, I assisted developers in setting up the applications they developed in their scrum teams. Mostly used tools, service, languages and frameworks: .NET Framework 4.8 / .NET Core 3.1 Azure App Service Azure Functions Azure Cosmos DB Azure SQL server Azure Storage
--	--

	Azure Service Bus Azure Key Vault Azure SignalR Azure Application Insights Azure Application Gateway Azure NAT Gateway Azure vNETs Azure Resource Manager templates / Bicep Azure DevOps (Pipelines) SQL Server 2018 SonarQube xUnit / AutoFixture / FluentAssertions
--	--

Company	Garansys / Caesar Match IT
Role	Freelance .NET / Full Stack developer / solution architect
Period	June 2017 – October 2017
Projects	Development and co-design a greenfield web application for a customer of Garansys. Based on ASP.NET MVC / Web API / Angular 1.6 / SQL Server / Azure / Bootstrap 3. Scalability and multi-tenancy was a focus point. As well as integrating with bol.com api

Company	BlIS Web and Mobile / KPMG
Role	Freelance .NET developer
Period	March 2017 – June 2017
Projects	Technical design and development on a internal web application for KPMG. Application to manage and monitor accreditation requirements for employees. Gathering data from multiple back-end systems and performing calculations to generate matches. Built with ASP.NET MVC, SQL Server, Entity Framework, Knockout, Typescript, Hangfire.

Company	Garansys / Caesar Match IT
----------------	----------------------------

Role	Freelance .NET developer
Period	November 2016 – January 2017
Projecten	Development on a service that integrates with the request process for employee assurances at a.s.r. / De Amersfoortse. The service checks if a request can continue by calling external services that provide information on the company and its stakeholders. WCF / Web API / SQL Server / Javascript / Web Forms. Development on Woningborg Portal. WCF / ASP.NET MVC / Javascript. Migrating sourcecode from TFS to Git. Proof of Concept migratie of the portal to Azure.

Company	TamTam (part of DEPT)
Role	Freelance Back-end / Umbraco developer
Period	March 2016 – October 2016
Projects	Configuring a continuous intergration and deployment environment based on Bamboo and Octopus Deploy for a website platform consisting of 5 different applications and a number of middleware services. Development of a content portal based on Umbraco 7 for the public affairs department of a major pensionfund. Development on a website based on Umbraco / MS Azure for Powned (dutch broadcasting network). Migration of old content (100K+ articles, 15 million comments). Site generates over 1 million pageviews per day, so performance of the backend code is crucial. Development of the Keurmerkenwijzer (Quality marks guide) for Milieu Centraal based on Umbraco 7. Development of the site energiebesparendoejenu.nl. Part of a national campaign to promote different methods to isolatie your house.

Company	Garansys / Caesar Match IT
Role	Freelance .NET developer
Period	February 2016
Projects	Support the going live of a project for Woningborg Toetsing en Toezicht by solving high priority bugs in the software. Software runs on Azure, making use of the

	Azure Service Bus.
--	--------------------

Company	Hi-Tech Smart Systems Europe via Capwell
Role	Freelance Full Stack C# / KnockoutJS developer
Period	January – February 2016
Projects	Development on StoreSmart, software for self-storage companies. Based on ASP.NET MVC, SQL Server, Entity Framework, KnockoutJS.

Company	Garansys
Role	Senior .Net developer / Lead developer
Period	January 2012 – December 2015
Projects	Design and development of parts of WOGRIS (windows application for all employees), the internal information system of the Woningborg Groep. Design and development of the Woningborg Portal (web application bases on ASP.Net MVC4 and WCF) Design and development of MijnBuurtwelzijn.nl. A social platform to improve coherence in neighborhoods. This is based on ASP.Net MVC5 / Azure SQL and hosted on Azure. Design and development of Matchmaker Zorg for FWG. A platform to improve matching between clients and personnel in home care organisations. This consist of an ASP.Net web application with Web API and an iOS app created with Xamarin. Development of ExportDocumenten.com and ExportDocuments in Control for Pincvision. Platform based on ASP.Net MVC / Azure.

Company	42windmills
Role	Senior Software developer
Period	February 2011 – December 2011
Projects	Migrating the 42windmills platform to Microsoft Azure.

	Portal to deploy generated / customized applications to Windows Azure with an integration to the Azure Marketplace.
Extra activities	Presenting the case of migrating the platform to Azure to the Dutch Windows Azure User Group (WAZUG) Participant in the advisor group for the Azure Integration pack of the Microsoft Enterprise Library

Company	Tam Tam
Role	Architect / Lead developer
Period	October 2007 – January 2011
Projects	Intranet for a dutch Engineering Multinational with 3200 employees based on SharePoint 2010. Digital project environment for projectbureaus of Gemeente Amsterdam based on SharePoint 2010. Corporate website for Bouwinvest based on SharePoint 2007 Digital Collaboration platform based on SharePoint 2007 for all employees of ZLTO Digital forms / workflow solution for Liberty Global Nederland Protocol management system based on SharePoint 2007 for Rivierenland Ziekenhuis Extranet and website based on SharePoint 2007 for Amphia Ziekenhuis in Breda
Company	AedifiComm
Role	Software developer / Projectmanager
Period	February 2002 – September 2007
	Projectleader and developer of an intranet / extranet application for the management of customers and fleet of a carsharing company Projectleader and developer on multiple web applications for a dutch energy company. Migrating an Access database application to SQL server with replication across multiple locations. Multiple small web / windows applications

EDUCATION

1999 – January 2003	Bachelor of Engineering, Elektrotechniek, Major Telematica RK Technische Hogeschool Rijswijk Diploma: Cum Laude
1997 – 1999	Atheneum, Vlietland College Leiden, Diploma: Yes Subjects: Dutch, English, Mathematics A, Mathematics B, Physics, Chemistry, Biology, History
1992 – 1997	Gymnasium, Stedelijk Gymnasium te Leiden. Diploma: No

COURSES / WORKSHOPS / CONFERENCES

April 2010	Certified ScrumMaster – Zilverline
November 2009	SharePoint 2010 Ignite for Developers
April 2009	Microsoft Office14 Developer Advisory Council – Redmond
Februari 2008	Microsoft Office Developer Conference – San Jose
April 2004	IBM SW225V5: Servlets and JSP Development with WebSphere Studio Version 5 IBM SW237V5: Developing Web Applications with WebSphere Studio 5

CERTIFICATES

MCTS: Microsoft Office SharePoint Server 2007 – Configuration: 70-630
MCTS: Microsoft Office SharePoint Server 2007 - Application Development: 70-541
MCTS: Windows SharePoint Services 3.0 - Application Development: 70-541
MCTS: Microsoft Office SharePoint 2010, Configuring: 70-667
